Summary

I'm a Software Engineer with 3+ years of experience building full-stack applications, scalable backend systems, and AI-powered solutions. I enjoy transforming complex business requirements into reliable, maintainable software using modern technologies and engineering best practices. My work spans backend development, cloud infrastructure, distributed systems, and Retrieval-Augmented Generation (RAG) applications. I'm passionate about continuously learning, solving challenging problems, and building products that create real impact.

Experience

Prudence Analytics & Software Solution, Software Engineer

May 2025 – Present

- Designed and developed scalable AI-powered enterprise applications using ASP.NET Core, Node.js, React, Redis, and AWS, delivering intelligent workflow automation and customer experience solutions.
- Built Retrieval-Augmented Generation (RAG) pipelines with LLM integrations, semantic search, vector databases, and Redis caching to enable context-aware document intelligence.
- Developed RESTful APIs, background processing services, and asynchronous workflows using BullMQ, improving application scalability and reliability.
- Integrated third-party AI services including presentation generation, intelligent automation, and workflow orchestration.
- Optimized backend performance through caching strategies, database tuning, and cloud-native deployment using Docker and AWS.
- Collaborated across frontend, backend, and AI teams to deliver production-ready enterprise software.

Tech: ASP.NET Core, Node.js, React, Redis, Docker, AWS, MySQL, Milvus, RAG, LLMs, REST APIs

Prudence Analytics & Software Solution, Software Developer

May 2024 – May 2025

- Developed enterprise full-stack applications using React, ASP.NET Core, Node.js, and MySQL, delivering scalable business solutions.
- Built automated media publishing workflows using asynchronous job queues, reducing manual operational effort.
- Developed reusable UI components and secure backend APIs for internal CMS and enterprise applications.
- Implemented Redis caching and optimized backend services to improve application responsiveness.
- Worked with AWS services for deployment, storage, and infrastructure enhancements.

Tech: React, ASP.NET Core, Node.js, Redis, MySQL, AWS, Docker, BullMQ

Prudence Analytics & Software Solution, Jr. Software Developer

May 2023 – May 2024

- Modernized legacy ASP.NET applications by migrating modules to React-based interfaces, improving maintainability and user experience.
- Redesigned the Social Media Publishing module, enhancing usability and overall application performance.
- Optimized complex MySQL stored procedures and database queries, reducing execution time for reporting and publishing workflows.
- Integrated external APIs and contributed to AI-assisted analytics features for enterprise platforms.
- Collaborated with cross-functional teams to deliver production-ready software enhancements.

Tech: ASP.NET MVC, React, JavaScript, MySQL, Bootstrap, REST APIs

Skills

- Programming Languages: C#, JavaScript, TypeScript, Python
- Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Zustand, Redux
- Backend: ASP.NET Core, ASP.NET MVC, Node.js, Express.js, REST APIs, GraphQL
- Databases: MySQL, PostgreSQL, MongoDB, Redis, Milvus (Vector Database)
- Cloud & DevOps: Docker, AWS, Git, GitHub
- AI & Machine Learning: Retrieval-Augmented Generation (RAG), LLM Integration, LangChain, Hugging Face, Ollama, AI Workflow Automation, Semantic Search, Vector Search
- Professional Skills: Problem Solving, System Design, Performance Optimization, API Design, Agile Development, Cross-functional Collaboration

Projects

AI-Powered Customer Experience Platform | Apr 2025 – Present

Tech Stack: React.js, ASP.NET Core, Node.js, Redis, Milvus, MySQL, Docker, AWS, Hugging Face APIs

- Developed an enterprise AI-powered Customer Experience Management (CXM) platform integrating intelligent workflow automation and LLM-powered features.
- Built scalable frontend and backend modules, integrated Gamma API for automated presentation generation, and implemented Redis caching for improved application performance.
- Developed semantic search capabilities using Milvus vector database and AI-powered workflows to enhance customer engagement and operational efficiency.

RAG Document Intelligence Platform | May 2025 – Present

Tech Stack: React.js, ASP.NET Core, Python, Node.js, Redis, MySQL, Docker, RAG, LLMs

- Built a Retrieval-Augmented Generation (RAG) platform enabling enterprise users to query internal documents using natural language.
- Implemented document ingestion, chunking, embedding generation, semantic search APIs, and LLM-based contextual responses.
- Improved internal knowledge accessibility by delivering fast, context-aware AI search with Redis caching and vector search techniques.

Social Media Publishing Platform | Apr 2023 – Present

Tech Stack: React.js, ASP.NET MVC, MySQL, JavaScript, Bootstrap, AWS S3

- Redesigned the complete social media publishing module, significantly improving user experience and application usability.
- Optimized complex MySQL stored procedures and backend queries, improving API responsiveness and publishing performance.
- Modernized legacy workflows while resolving performance bottlenecks across frontend and backend systems.

Education

Master of Computer Applications (MCA) Navinchandra Mehta Institute of Technology and Development	2024 - 2026
Bachelor of Science (B.Sc.) in Information Technology Guru Nanak Khalsa College (Autonomous)	2020 - 2023
